### **Agenda**

Jakarta MVC Demo Q&A

Framework orientada a ação construida sobre as camadas da JAX-RS.

- Framework orientada a ação construida sobre as camadas da JAX-RS.
- Aproveitar as tecnologias Java EE existentes.

- Framework orientada a ação construida sobre as camadas da JAX-RS.
- Aproveitar as tecnologias Java EE existentes.
- Integração com CDI e Bean Validation

- Framework orientada a ação construida sobre as camadas da JAX-RS.
- Aproveitar as tecnologias Java EE existentes.
- Integração com CDI e Bean Validation
- Fornece suporte interno para JSP e Facelets.

- Framework orientada a ação construida sobre as camadas da JAX-RS.
- Aproveitar as tecnologias Java EE existentes.
- Integração com CDI e Bean Validation
- Fornece suporte interno para JSP e Facelets.
- Contém suporte RestEasy, Jersey e Apache CXF através de modulos.

- Framework orientada a ação construida sobre as camadas da JAX-RS.
- Aproveitar as tecnologias Java EE existentes.
- Integração com CDI e Bean Validation
- Fornece suporte interno para JSP e Facelets.
- Contém suporte RestEasy, Jersey e Apache CXF através de modulos.
- Não se destina a substituição do frameworks baseado em componentes como JSF, mas simplesmente oferecer uma alternativa para construção de aplicações web no Java EE.

public class HelloController {

@Controller

public class HelloController {

}

javax.mvc.Controller

```
@Controller
@Path("hello")
public class HelloController {
```

```
@Controller
@Path("hello")
public class HelloController {
    @GET
    public String getHello() {
      return "hello.jsp";
```

```
@Controller
@Path("hello")
public class HelloController {
    @GET
    public Response getHello() {
      return Response.status(OK)
                  .entity("hello.jsp")
                  .build();
```

```
@Controller
@Path("hello")
public class HelloController {
   @View("hello.jsp")
   @GET
   public void getHello() {
                     javax.mvc.View
```

```
@Controller
@Path("hello")
public class HelloController {
    @GET
    public Viewable getHello() {
     return new Viewable("hello.jsp");
```

• Somente na RI - org.eclipse.krazo.engine.Viewable

### View Engines suportadas na Krazo(RI)

Asciidoc .adoc | .asciidoc

Freemarker .ftl

Handlebars .hbs | .handlebars

Jade .jade

Jetbrick .jetx

JSR-223 .groovy | .js | .py

Mustache .mustache

Pebble .peb

Stringtemplate .st

Thymeleaf .html

Velocity .vm

Jtwig .twig.html | .twig

# Model

#### Model

```
@Controller
@Path("hello")
public class HelloController {
    @Inject
    private Models model
    @View("hello.jsp")
    @GET
    public void getHello() {
        model.put("MSG", "SouJava");
                                       javax.mvc.Models
```

#### **Model - CDI**

```
@Named("jug")
@RequestScoped
public class JUG {
    private String nome;
javax.inject.Named;
• javax.enterprise.context.RequestScoped;
```

#### **Model - CDI**

```
@Controller
@Path("hello")
public class HelloController {
    @Inject
    private JUG jug;
    @View("hello.jsp")
    @GET
    public void getHello() {
        jug.setNome("SouJava");
```

#### Model

```
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
   <head>
        <title>MVC 1.0 Hello Demo</title>
   </head>
   <body>
        <h1>Hello ${MSG} usando Model</h1>
        <h1>Hello ${jug.nome} usando CDI</h1>
   </body>
</html>
```

• Suporte apenas JSP, Facelets e Thymeleaf .

### BOOT

```
@ApplicationPath("resource")
public class MVCApplication extends Application {
  @Override
  public Map<String, Object> getProperties() {
    Map<String, Object> defaultFileExtension = new HashMap<>();
    defaultFileExtension.put(Properties.DEFAULT_VIEW_FILE_EXTENSION, "jsp");
    return defaultFileExtension;
   javax.ws.rs.ApplicationPath
   javax.ws.rs.core.Application
```
